Jun 18, 2026	V1	Investigations	CID usage - and review of Exclusion image repository	Review of V1, and impact assessment. 1. Investigations occasionally source and include images of patron if directed. 2. Investigations need to upload images

OVERVIEW

This project is for Remediation milestones 10.3.8 (Technology) and 6.3.3 (Exclusions) in migrating Prevention of Play / Exclusions Management functionality and data from CID to Salesforce, ensuring the entire Prevention of Play / Exclusions Management lifecycle for a Patron is managed within Salesforce.

Scope change request

This scope change request is the result of meeting of project stakeholders held on 28 May, 2026 to review UAT findings and the associated operational impacts and risks. A decision was made to delay the Salesforce implementation in order to incorporate an image management solution for handling images related to Prevention of Play / Exclusions Management. The objective is to deliver business outcomes by ensuring data integrity, aligned processes, and successful adoption of a new Salesforce solution. The scope also includes understanding the broader CID use cases, beyond Exclusions Management, to inform a separate decommissioning initiative on the Technology Roadmap.

Scope of this document

This document only addresses the the main patron image and Exclusion Image Repository. The broader CID use cases will be captured in a dedicated document.

LEGISLATIVE OR REGULATORY REFERENCES

Queensland - ICM I.5: EXCLUSION ORDERS

39.Surveillance takes an active role in the detection of excluded patrons by:

- a. Utilising exclusion footage and images of excluded patrons to assist with identifying excluded patrons;**
- b. Undertaking patron checks and conducting general surveillance of patrons;
- c. Monitoring high traffic areas; and
- d. Utilising a Facial Recognition System (FRS) (where in use).

40.Surveillance may receive an alert, observe, or be advised, that a patron is in or is attempting to enter the Casino and may be in breach of an exclusion order.

41.Surveillance will make every attempt to locate and monitor the patron and advise:

- a. Safety and Security Management;
- b. OLGR; and
- c. Other Casino Management as relevant.

42.The patron will be monitored until one of the following occurs:

- a. Surveillance is satisfied the patron is not in contravention of an Exclusion Order;
- b. The patron is denied entry to the Casino;
- c. The patron is escorted from the Casino;
- d. The patron is escorted to the OLGR/CCU Offices; or
- e. Upon leaving the Casino (when the patron leaves prior to being approached).

NSW - ICM 14 Responsible Gambling & Exclusions

36. A database or any other records management system for retaining and making available

sufficient information, to facilitate the identification and detection or persons subject to an exclusion order must be maintained at all times. Only staff authorised by the Casino Operator will have access to this database or any other records management system.

TERMINOLOGY

- surveillance image gallery: a set of images linked to a patron, these images are used to positively confirm the identity of the patron for surveillance to help enforce an exclusion or TPOE.
- exclusion image repository: a set of images linked to an excluded or TPOE'd patron, these images are used to positively confirm the identity of the patron. Primary purpose of the images is identification.
- surveillance profile: a set of surveillance artifacts used by surveillance to support enforcement of the exclusions
 - Each patron's profile consists of:
 - list of contraventions,
 - list of active exclusions,
 - primary surveillance image,
 - surveillance image gallery,
 - surveillance image notes

OBJECTIVES/OUTCOMES

- Improved search & accessibility
 - Faster, more accurate retrieval.
- Enhanced user experience
 - Simpler workflows for uploading, managing, and accessing images, together with bulk extract capability for upload to FRS
- Data quality & consistency
 - Standardised naming conventions, formats, and metadata (e.g. upload date/time) across all assets.
- Operational efficiency
 - Reduced manual effort and time spent managing or locating images.
- Stronger governance & compliance
 - Clear ownership, permissions, and adherence to retention/security policies.
- Scalability for future growth
 - Platform supports increasing volumes and new use cases.

SCOPE

In Scope

- Current state assessment

Out of Scope

- Detailed current state process maps

- Inventory images, metadata, and understand existing processes and dependencies.
- Target state definition
- Define desired structure, metadata and taxonomy. Alignment, where possible, across jurisdictions.
- Data mapping & standards
- Align formats, naming conventions, metadata fields, and classification rules.
- Migration strategy
- Agree approach to handle duplicates or legacy data.
- Validation & quality assurance
- Ensure images, metadata, and functionality meet business requirements.
- Target State definition for any process, images or data not directly related to Exclusions Management
- Decommissioning of legacy system, CID

KEY ASSUMPTIONS

	Assumption	Detail	Origin
1	Enduring exclusion image repository	The patron's Exclusion image repository will be stored until the patrons account record is disposed	Discovery Sessions
2	Enduring surveillance image repository	The patron's surveillance image repository (CID) will be stored until the patrons account record is disposed	Discovery Sessions
3	Only images linked to patrons who are recorded as excluded in CID at the time of implementation will be migrated to Salesforce.	One bulk image migration will occur. After go live image transfer will occur ad hoc as needed and be manually processed	Discovery Sessions
4	Manual image transfer process from CID to the Exclusion Image Repository	After go live images will be transferred using a manual process.	Discovery Sessions
5	Managing images for Patron merging will be a manual process	Relinking images from the non surviving account to the surviving account will be manual.	Discovery Sessions
6	Patrons without Salesforce record	CID will be used for patrons that legitimately do not have a Salesforce record.	Draft BRD review session Jun 15, 2026
7	Legacy CID records	Legacy CID accounts do not have a record in Salesforce, unless these accounts are Actively being excluded, surveillance images for legacy	Requirements walkthrough - Image Management

		accounts will not be migrated into Salesforce	for Salesforce Exclusions Register Jun 16, 2026
8	All Excluded patrons in CID do have a Salesforce account.	All actively excluded accounts in CID , have a matching Synkros account as well as a matching Salesforce account.	Requirements walkthrough - Image Management for Salesforce Exclusions Register Jun 16, 2026

DECISIONS

	Detail	Status		Owner
1	Once a patron has an exclusion image profile in Salesforce the Surveillance identification images will be managed in salesforce	Agreed	Jun 15, 2026 Jun 17, 2026	@Carl Woodall / @Calum Scorgie
2	CID images will be copied from CID into the Exclusion Image Repository.	Agreed	Jun 15, 2026	@Carl Woodall / @Calum Scorgie

KNOWN & RESIDUAL RISKS

This initiative reduces several current risks; however, some risks will remain and new risks may be introduced.

ID	Description	Type (Existing /	Impact (High/Med/Lo	Mitigation / Notes
----	-------------	---------------------	------------------------	--------------------

		Residual / New)	w)	
R1	Increased organisation of patron exclusion images, however there will be a reduction in image metadata for non excluded patrons	Residual	Low	Keep well written notes in CID, these can be used to setup the patron Exclusion Images if the patron becomes excluded

SCENARIOS AND USE CASES

- Scenario 1 - active patron with surveillance history becomes excluded
 - Use Case 1: Apply exclusion - patron with surveillance history
 - Use Case 2 : Revoke exclusion - patron with surveillance history
- Scenario 2 - active patron with no surveillance history becomes excluded
 - Use Case 1: Apply exclusion - patron with no surveillance history
 - Use Case 2 : Revoke exclusion - patron with no surveillance history
 - Use Case 3 : Begin surveillance of patron with no surveillance history

Scenario 1 - active patron with surveillance history becomes excluded

Patron Bob - is known to surveillance and is an active player. Patron Bob is then involved in an incident and is excluded for 6 months.

Use Case 1: Apply exclusion - patron with surveillance history

- Patron Bob has a player profile in CID.
- Patron Bob's player profile in CID has multiple images used to identify Patron Bob
- **Trigger:** Apply exclusion
- Once Patron Bob becomes excluded, Patron Bob's identification images must be "copied" into the "Exclusion Image Repository"
 - Key surveillance images are manually "copied" from CID into the "Exclusion Image Repository"
 - The best image is tagged in the "Exclusion Image Repository" as the Patron's Surveillance profile image or defaulted to the most resent uploaded image
 - Other key images are tagged in the "Exclusion Image Repository" as the Patron's Surveillance profile favourite images
 - optionally, relevant image metadata is captured into the "Exclusion Image Repository" per uploaded image.
 - While Patron is excluded any new surveillance identification images are uploaded and processed into "Exclusion Image Repository"

Use Case 2 : Revoke exclusion - patron with surveillance history

- Patron Bob has a player profile in CID.
- Patron Bob's player profile in CID has multiple images used to identify Patron Bob
- Patron Bob has been excluded for 6 months
- **Trigger:** Revoke exclusion
- Once Patron Bob exclusion is revoked, Patron Bob's identification images must remain in "Exclusion Image Repository"
 - Patron Bob's "Exclusion Image Repository" remains active while Patron Bob is not excluded.
 - Surveillance continue to use Patron Bob's "Exclusion Image Repository" for surveillance identification related activity
 - CID is still used for evidentiary images.

Scenario 2 - active patron with no surveillance history becomes excluded

Patron Bob - is not known to surveillance and is an active player. Patron Bob is then involved in an incident and is excluded for 6 months.

Use Case 1: Apply exclusion - patron with no surveillance history

- Patron Bob does not have player profile in CID.
- **Trigger:** Apply exclusion
- Once Patron Bob becomes excluded
 - any new surveillance identification images are uploaded and processed into "Exclusion Image Repository"
 - The best image is tagged in the "Exclusion Image Repository" as the Patron's Surveillance profile image
 - Images are sourced by surveillance and uploaded from the digital file.
 - Other key images are tagged in the "Exclusion Image Repository" as the Patron's Surveillance profile favourite images
 - While Patron is excluded surveillance identification images are uploaded and processed into "Exclusion Image Repository"

Use Case 2 : Revoke exclusion - patron with no surveillance history

- Patron Bob has been excluded for 6 months
- While Patron is excluded surveillance images are uploaded and processed into "Exclusion Image Repository"
- **Trigger:** Revoke exclusion

- Once Patron Bob exclusion is revoked, Patron Bob's identification images must remain in "Exclusion Image Repository"
 - Patron Bob's "Exclusion Image Repository" remains active while Patron Bob is not excluded.
 - Surveillance continue to use Patron Bob's "Exclusion Image Repository" for surveillance identification related activity
 - CID is still used for evidentiary images.

Use Case 3 : Begin surveillance of patron with no surveillance history

- Patron Bob has no player profile in CID.
- Patron Bob's has "Exclusion Image Repository" history
- Patron Bob has been excluded for 6 months since revoked
- **Trigger:** Alerted to surveillance
- Surveillance continue to use Patron Bob's "Exclusion Image Repository" for surveillance identification related activity
- CID is still used for evidentiary images.

BUSINESS REQUIREMENTS - MAIN PROFILE IMAGE

KEY	Summary	Description	Owner/s
BR01	Image Management - Main Profile image - high detail	The main profile image on a contact in Salesforce is also called "contact selfie" or "Salesforce contact profile image". It must be possible to view the main profile image, <u>on the patron's Salesforce contact record</u>, with as much detail as possible, and the image must be without watermarks or overlays distorting key facial details used to identify the patron.	Marketing / Premium Services
BR02	Image Management - Main Profile image - remove X	Required change the red "X" overlaying an excluded patrons photo must be replaced by a red border "□"	Marketing / Premium Services

BR03	Image Management - Main Profile image - Excluded Text	Must include the text “Excluded” centered in the top and bottom border of the red “  ”	Marketing / Premium Services
BR04	Image Management - Main Profile image - Click to enlarge	Must be able to click on profile image and see the high resolution image	Marketing / Premium Services
BR05	Image Management - Main Profile image - Mobile devices	It must be possible to view the patron profile image, on a mobile device.	Marketing / Premium Services
BR06	Image Management - Main Profile image - Retain Aspect Ratio	Must retain original aspect ratio of image so that the photo is undistorted and can be used to identify a person.	Marketing / Premium Services

BUSINESS REQUIREMENTS - EXCLUSION IMAGE REPOSITORY

KEY	Summary	Description	Owner/s
BR07	Retain Current	@Carl Woodall @Calum Scorgie @Ryan Patterson to please review and confirm if any current features has	Surveillance

	Features	<u>been left out?</u>	
BR08	Image Management - nesting	Images must be located directly within the patron tab. Images must not be nested deep i.e. Users must not have navigate through multiple items (via the exclusion or the contravention)	Surveillance
BR09	Image Management - Image transfer from CID to Exclusion image repository	After the bulk image migration occurs. After go live image transfer will occur ad hoc as needed and be manually processed. As a surveillance user I need to transfer patron images stored in CID to a patron's profile in Salesforce.	Surveillance
BR10	Image Management - specifications	• Minimum resolution for an image must not be less than 720p • Image aspect ratio must remain unchanged • Must support image formats: ◦ png, jpg, webp ? Are there other image formats to include? @Carl Woodall	Surveillance
BR11	Image Management - multiple images per patron	Each patron must have one or more surveillance image. Patrons without surveillance images will have an empty image gallery and a message must display that there are no images in this patron's image gallery	Surveillance
BR12	Image Management - Update metadata	As a surveillance user I must be able to update and edit image metadata in the image repository.	Surveillance
BR13	Image Management	Each image must include the following attributes, some attribute may be left blank:	Surveillance

	t - Image metadata	• image uploaded date time (calculated on upload) no change • image event date time (optional) • image created date (taken from the file metadata) no change • file name (mandatory) no change ◦ patronID_uploadedDateTimeStamp.extension • Link to related exclusion (optional) • Link to related contravention (optional) • Link to related patron (mandatory) no change (unless being merged) • description (optional) • source property ◦ The Star Brisbane ◦ The Star Sydney ◦ The Star Gold Coast ◦ External ◦ CID Qld ◦ CID NSW • user name: no change ◦ the user name of current user uploads the image	
BR14	Image Management - view image metadata	Each image must have accessible metadata, and users must be able to view this metadata when selecting or enlarging an image. The metadata should include all available attributes associated with the image and be presented in a clear and readable format.	Surveillance
BR15	Image Management - Image metadata - track changes	Changes to Image metadata must be tracked. • original value, • updated value • user name • date time Attributes to track: • image uploaded date time	Surveillance

		• image event date time • image created date • file name • Link to related exclusion • Link to related contravention • Link to related patron • description • source property • user name	
BR16	Image Management - Key image tagging	As a Surveillance, CLM, Investigations, Safer Gambling user I need to optionally tag each image as the primary identification image, so that the tagged image is displayed first when viewing a patron's image gallery. This must not impact the primary image displayed on the patrons contact record in Salesforce. As a Surveillance, CLM, Investigations, Safer Gambling user I need to optionally tag each image as the primary identification image, so that the tagged image is displayed as the Surveillance primary image.	Surveillance
BR17	Image Management - favorite image tagging	As a Surveillance, CLM, Investigations, Safer Gambling user I need to optionally tag each image as a favourite identification image, so that the tagged favourite image(s) are displayed before untagged images.	Surveillance
BR18	Image Management - image details	As a Surveillance, CLM, Investigations, Safer Gambling user I need to optionally capture an image description for each image so that the image is searchable using keywords and users can provide details to other team members about the image.	Surveillance
BR19	Image Management - Single Export	Must be possible to select a single image in a patron's image gallery so that is it possible to export the image.	Surveillance

BR20	Image Management - Bulk Export	Must be possible to select multiple images for one or more patrons so that it is possible to export a set of images that can be used to upload into the FRS. As a surveillance user I need to export the primary surveillance image for each newly excluded patron for the day, or time frame So that I can upload the images into the FRS.	Surveillance
BR21	Image Management - Add Image - Surveillance	As a surveillance user I need to add a single image or multiple images to a patrons surveillance profile	Surveillance
BR22	Image Management - Add Image - Safer Gambling	As a Safer Gambling user I need to add a single image or multiple images to a patrons surveillance profile	Surveillance
BR23	Image Management - Add Image - CLM	As a CLM user I need to add a single image or multiple images to a patrons surveillance profile	Surveillance
BR38	Image Management - Add Image - Investigations	As an Investigations user I need to add a single image or multiple images to a patrons surveillance profile	
BR24	Image Management - Add Image - alert	Need to alert Surveillance that a new image has been added by non surveillance team member, so that the image can be tagged as a priority image if good enough	Surveillance

BR25	Image Management - Remove Image - Qld	As a Qld user (Surveillance shift, assistance shift manger or higher) I need to remove a single image or multiple images from a patron's surveillance profile and provide a reason as for the change.	Surveillance
BR26	Image Management - Remove Image - NSW	As a NSW user (Assistance Surveillance Duty Manager or Higher) I need to remove single image or multiple images from a patron's surveillance profile and provide a reason as for the change	Surveillance
BR27	Image Management - Gallery	As a Surveillance user I need to view multiple images of the patron. The primary surveillance image is shown first followed by the favourite images (Newest first), followed by the rest of the patron images (newest first)	Surveillance
BR28	Image Management - Gallery - thumbnails	The image gallery presents each patron image as a thumbnail, and users can enlarge any thumbnail to view a more detail version.	Surveillance
BR29	Image Management - Gallery - viewing enlarged images	While viewing an enlarged image, users must be able to quickly navigate quickly to the next or previous image within the patron's image gallery.	Surveillance
BR30	Image Management - Merged patrons	As a CLM user I must be able to transfer images from one patron record to another so that when patron accounts are merged, the images can be linked to the surviving patrons	Surveillance
BR31	Accessibility	Must be accessible and support all levels of ability (eg, colour contrast, font size, readable screens). "All image viewing functionality must comply with accessibility standards, ensuring that users of all abilities can effectively interact with the image gallery. This includes providing keyboard navigation, screen reader compatibility, sufficient color contrast, and accessible	Surveillance

		alternatives (such as descriptive text) for all images and controls”	
BR32	Image Management - Surveillance Reporting	Users must be able to select and attach relevant images from the gallery to export with the metadata.	Surveillance
BR33	Image Management - Exclusion Reporting	Currently there are 4 Exclusion related reports that include patron images that are sourced from CID. These reports need to be updated to source the images from the “Exclusion Image Repository” • Exclusion Photos - used by Surveillance • Excluded Player Detail Report (OLGR) - used by Safer Gambling • Daily Exclusions Register (For Crown) - used by CLM • Exclusions sharing Report for QLD Operators - used by CLM	Surveillance, CLM, Safer Gambling

IMAGE REPOSITORIES

It is agreed that there will be two separate image repositories. While the patron is not excluded their surveillance images will be managed in CID. As soon as the patron becomes Excluded their key images need to be moved or copied into the Exclusion Image Repository. Excluded patron images will remain in the Exclusion Image Repository until the patron’s exclusion is revoked. Once the patron is no longer excluded, if required by surveillance, the patron’s surveillance images will be copied / moved into CID.

DATA MIGRATION - EXCLUDED PATRON IMAGES

KEY	Summary	Description	Owner/s
BR34	CID - Excluded Patron Images	All images associated with an excluded patron at Go Live must be migrated into the excluded Patron’s Image Repository	Surveillance

BR35	CID - Excluded Patron Images - missing metadata	See “update metadata” requirement above	Surveillance
BR36	CID - Excluded Patron Images - metadata	Migrated values for each attribute is described below: • Image file name : ◦ thumb nail sized to be derived as “<<PatronId>>_<<PhotoNum>>_TN.JPG” ◦ regular sized to be derived as “<<PatronId>>_<<PhotoNum>>.JPG” • Image size ◦ NA - left blank • Image type ◦ will be JPG - set to “JPG” • Linked Exclusion ◦ NA - linked • Linked patron ID ◦ Current PatronId the image is associated with in CID • Linked contravention ◦ NA - linked • Image date and time ◦ Created date • Uploaded date and time ◦ automatically assigned during upload process at the date the image is loaded in the new repository • Image Source ◦ for data migration this be the Source CID database ▪ “CID The Star Sydney” or ▪ “CID The Star Gold Coast” or ▪ “CID The Star Brisbane”	Surveillance

BR37	CID - Excluded Patron Images - CID post migration	CID must remain unaffected by the data migration into salesforce, CID images must remain available and unchanged	Surveillance
------	--	--	--------------

Sample image data available from CID for a single patron
